

# **METANOIA**

## **Tech Pictionary:**

### **Description:**

- Tech Pictionary is a creative and entertaining game where participants draw various IT-related terms, ranging from hardware and software components to programming languages, internet phenomena, and emerging technologies, other players eagerly attempt to decipher the drawings and guess the correct terms.

### **How to Play:**

- Teams take turns sending a player to draw while the rest of the team guesses what is being drawn on IT-related concepts without using words.
- Teams earn points for correctly guessed words or phrases and the team with the most points wins.
- Rotate the drawing responsibility among team members to ensure everyone gets a chance to participate.
- The game will be played for a set number of rounds, or until one team reaches a predetermined point goal.
- There will be penalties for breaking the rules, such as deducting points or skipping a turn.
- Have Fun! Remember that the primary goal is to have fun and enjoy the game together.

# **Rules and Regulation:**

## **1. Drawing Rules:**

- The drawer cannot speak, use letters, numbers, symbol, or gestures to give clues.
- The drawing must be done in a limited time, typically one to two minutes.

## **2. Guessing Rules:**

- The team members (excluding the drawer) attempt to guess the word or phrase being drawn by raising their hand as quickly as possible.
- If the team members fail to identify the drawing before the time runs out, the team will not get a point.

## **3. Difficulty Levels:**

- There will be different difficulty levels for the IT-related terms. For example, beginner, intermediate, and advanced levels. This allows players of varying skill levels to participate and enjoy the game.

## **4. Time Limits:**

- There will be a time limit for each drawing to add urgency and excitement to the game. For example, players might have 1-2 minutes to complete their drawing.

## **5. Team Play:**

- Participants will be divided into teams of two or more and have them take turns drawing and guessing. This fosters the collaboration and teamwork among the players.

## **6. Technology Categories:**

- There will be categories within the IT realm, such as hardware, software, programming languages, internet terms, cybersecurity, and emerging technologies. Players can choose a category before starting their turn.

## **7. Themed Rounds:**

- We may introduce themed rounds based on specific tech topics, such as "Social Media", "Gaming", "Artificial Intelligence", or "Cybersecurity". This adds variety and keeps the game fresh.

## **8. Prizes & Certification:**

- Prizes or rewards will be distributed to the winning individual or team. Each participant will be recognized with a certificate for their dedication and participation.
